No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                        Score

                                                                                                                                                                                                                                large B-cell lymphoma), the most common non-Hodgkin's lymphoma, by differential display technique. It was found to be more abundant in tumours from patients with high risk fatal DLB-CL disease than low risk cured disease. BAL transcripts are most abundant in lymphoid organs e.g. spleen, foetal liver and peripheral blood, and several non-haematopoieti organs e.g. heart and skeletal muscle. BAL is involved in modulation of cellular adhesion and aggressiveness/severity of malignancy such as DLB-CL. BAL nucleic acid and protein are useful for identifying cells exhibiting or predisposed to malignancies such as lymphoma, sarcoma, carcinoma and myeloma. BAL proteins are useful as immunogens to raise anti-BAL antibodies. BAL modulators or BAL molecules can be used for
                                                                                                                                                                                               prophylactic and therapeutic treatment of a subject susceptible to or having a disorder associated with aberrant BAL expression or activity such as non-Hodgkin's lymphoma. It is also useful in vaccine preparati
                                                                                                                                                                                                                                                                                                                                                                    protein obtained by screening two human cDNA libraries derived from anti-immunoglobulin activated splenocytes and the Raji Burkitts lymphoma cell line cloned into pCDM8. The BAL locus is mapped to chromosome 3q21. BAL was identified to be differentially expressed in DLB-CL (Diffuse

                                                                                                                                         The present sequence represents a human interferon-induced tetraspan (III) protein (I). (I) has cytostatic, anti-IIV, immunosuppressive and antiinflammatory activities. The polynucleotide (II) encoding (I) can be used in gene therapy. (I) and (II) can be used for treating or preventing a pathology associated with (I) in a subject, preferably human, or for the manufacture of a medicament for treating a syndrome associated with a human disease selected from a pathology associated with (I). (I) and (II) can be used for treating autoimmune diseases, inflammatory diseases, cardiovascular diseases, metabolic diseases, and for inhibiting cancer growth and metastasis. (I) or (II) can be used as diagnostic and/or prognostic markers, in gene therapy, as research tools, and for tissue regeneration in vitro and in vivo.
                                                                                                                                                                                                                                                                                         Novel isolated interferon-induced tetraspan polypeptide, useful treating autoimmune, inflammatory, cardiovascular and metabolic diseases, and for inhibiting cancer growth and metastasis -
                                                                                                                                                                                                                                                                                                                                            WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a human interferon-induced tetraspan (IIT) protein (I). (I) has cytostatic, anti-HIV, immunosuppressive and antiinflammatory activities. The polynucleotide (II) encoding (I) can be used in gene therapy. (I) and (II) can be used for treating or preventing a pathology associated with (I) in a subject, preferably human, or for the manufacture of a medicament for treating a syndrome associated with a human disease selected from a pathology associated with (I). (I) and (II) can be used for treating autoimmune diseases, inflammatory diseases, cardiovascular diseases, metabolic diseases, and for inhibiting cancer growth and metastasis. (I) or (II) can be used as diagnostic and/or prognostic markers, in gene therapy, as research tools, and for tissue regeneration in vitro and in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated interferon-induced tetraspan polypeptide, useful treating autoimmune, inflammatory, cardiovascular and metabolic diseases, and for inhibiting cancer growth and metastasks -

The present sequence is the protein sequence for a human transcription factor. The transcription factor and its coding sequence are useful in the diagnosis, treatment and prevention of diseases associated with altered expression of the transcription factor e.g. cell proliferative autoimmune/inflammatory, neurological and developmental disorders. A

proliferative,

                                                                                                                                                                                             organs e.g. heart and skeletal muscle. BAL is involved in modulation of cellular adhesion and aggressiveness/severity of mallgnancy such as DLB-CL. BAL nucleic acid and protein are useful for identifying cells exhibiting or predisposed to mallgnancies such as lymphoma, sarcoma, carcinoma and myeloma. BAL proteins are useful as immunogens to raise anti-BAL antibodies. BAL modulators or BAL molecules can be used for prophylactic and therapeutic treatment of a subject susceptible to or having a disorder associated with aberrant BAL expression or activity.
                                                                                                                                                                                                                                                                                                              The present sequence is a short form of B-aggressive lymphoma (BAL) protein obtained from mouse (BALb-c) spleen. BAL was identified to be differentially expressed in DLB-CL (Diffuse large B-cell lymphoma), the most common non-Hodgkin's lymphoma, by differential display technique. It was found to be more abundant in tumours from patients with high risk fatal DLB-CL disease than low risk cured disease. BAL transcripts are most abundant in lymphoid organs e.g spleen, foetal liver and peripheral blood, and several non-haematopoiet.
                                                                                                                                                                                  such as non-Hodgkin's lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New B-aggressive lymphoma nucleic ac

Xue AJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM8302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polynucleotides and polynucleotides and polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                        of ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, ar metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, related to the control of the contro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PCOS; ovarian cyst; dysmenorrhoea; endocrine disorder; infection inflammatory condition; immune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorges gastrointestinal disorder; urinary system disorder; drug screenif gene therapy; chromosome mapping; forensic analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotectiantinflammatory; gynaecological; reproductive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                      Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03168 to AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             to the complementary strand of a polynucleotide which comprises one of the 502 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldr-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthitis).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABB84807
                                        holoenzyme delta subunit proteins and agents that modulate their activity. The agents are useful in the treatment of bacterial infections e.g. S. pyogenes, S. aureus, S. pneumoniae, Mycoplasma, Yersinia, Corynebacterium, Salmonella, Mycobacterium tuberculosis or M. leprae. The invention provides a convenient means of identifying compounds which modulate DNA replication in bacteria and therefore provide antibacterial targets, and which are also useful for amplification of DNA. ABL87935 to ABL88071 and ABB84724 to ABB84816 represent sequences used in the exemplification of the present
Sequence
                                                                                                                                                                                 The present invention describes nucleic acid sequences encoding a DNA polymerase III holoenzyme delta subunit (I) from bacteria. (I) has antibacterial; tuberculostatic; antileprotic. Methods from the present invention can be used for screening for bacterial DNA polymerase
                                                                                                                                                                                                                                                              Example
                                                                                                                                                                                                                                                                                           Nucleic acid encoding a DNA polymerase III holoenzyme delta subunit from bacteria, useful for screening agents that modulate the subunit activity which is useful in the treatment of bacterial infections e.g. S. pyogenes and S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                       Bullard
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-JUL-2000;

                     The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-off primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5' end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human protein
                                                                                                                                                                      Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs
                                                                                                                                                                                                                                          WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; AAB92446 to AAB95893 represent inventions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by leading the proteins and the treatment or prevention of infections by leading to the treatment or prevention of infections by leading to the treatment or prevention of infections by leading to the prevention of the treatment or prevention of the treatment or prevention of the prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, are for biosynthesis and biodegradation, especially biosynthesis of Vitamin and Telephone sequence are useful for the second of Vitamin and Telephone sequence of the sequence and related organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Danies Garage Chakraborty T, Domann Chakraborty T, Domann Perez-Diaz J, Baquero

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The acnes proteins may also be used as diagnostic agents for determining P. acnes presence for example by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-APR-2000;

Sequence 2, Application US/09721832
Patent No. 6399346
GENERAL INFORMATION:
APPLICANY: Beraud, Christophe
APPLICANY: Freedman, Richard
TITLE OF INVENTION: No. 6399346el motor proteins and
TITLE OF INVENTION: their use
FILE REFERENCE: 1055
CURRENT APPLICATION NUMBER: US/09/721,832
CURRENT FILING DATE: 2000-11-24
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                    ; ORGANISM: Human
